Direct Submission
Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing
project, Sanger Centre, The Wellcome Trist Genome Campus, Hinxton,
Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk and
hi@sanger.ac.uk
Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The V+ i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
Email: nelesyed@rigr.org
Details of T. brucei sequencing at the Sanger Centre are available
at http://www.sanger.ac.uk/Projects/T_brucei/.

This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces ervazzii, Zygosaccharomyces rouxii, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyverii, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Rluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb ware prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 541

               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conidiobolus coronatus (Delacroixia coronata)

Direct Submission
Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 18A, E-mail: barrell@sanger.ac.uk and nhl@sanger.ac.uk
Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (
Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (
4 kb). The v + i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Maxing small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barrell, Oxford University Press, 1999).
Bariell, Tbrucei sequencing at the Sanger Centre are available at http://www.sanger.ac.uk/Projects/T_brucei/.

/dlone lib="Organ: Brain Vector: pYX- Asc; Site 1: EcoR 1; Site 2: Not 1; The library was constructed according Site 2: Not 1; The library was constructed on a 1% agarcse pel. First strand cDNA synthesis was primed with oligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not! and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is AgcGAGACAG. This library was created for the University lows Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Ameral Health (NIMH), Hemin Chin, Ph.D.,

// note="vector: pUC18; Site=1: Smal; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTAt 10:1) was mechanically sheared to give a tight size distribution (approx 2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared
DNA library constructed at TIGR. Clones will be available for
distribution through ATCC. Sheared DNA end sequences search page:

/note="Organ: Eye, Vector: PXX-Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel First strand CDNA synthesis was primed with oligo-dr
primer containing a Not I site . Double strand CDNA was
size selected according to mRNA size fraction, ilgated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TTATTGAAGT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

SerMetAlaThrProlleValAlaGlyAsnValAlaGlnLeuArgGluHisPheValLys 273	Trypanosoma. 1 (bases 1 to 574) 1 (bases 1 to 574) Chillingworth, C., Crmond, D., Harris, B., El-Sayed, N., Hou, L., Melville, S.E., Rajandream, M.A. and Barrell, B.G. Direct Submission Trypanosoma brucei genome sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge Callo 18A, E-mail: barrell@sanger.ac.uk and	nhisanger act.uk Constructed at the Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREUS27/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (1 was mechanically sheared 4 kb). The v + i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Maxing small insert libraries for whole genome shorgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barrell, Oxford University Press, 1999). Benalls of T. brucei sequencing at the Sanger Centre are available at http://www.sanger.ac.uk/Projects/T_brucei/. This nucleotide sequence encodes a novel protease (see AAW82382) of Bacillus sp. JP170 (NCIB 12513). The sequence in plasmid p170BAN is contained in Bacillus subtilis LC20 NRRL B-21680. The protease gene was isolated from chromosomal DNA of UP170 (P010wing preparation of probes based on protease N-terminal and internal peptides (see AAW89549-50), cremening of chromosomal libraries, isolation of the 3' end of the gene by inverse PCR (see AAV82410-11), reconstruction of 5' and 3' ends and PCR amplification (see AAV82410-16). Claimed recombinant host cells can be used in method for producing the protease. The protease is used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of proteins, degradation of undesired stability towards oxidation under alkaline conditions, e.g. towards bleaching agents of the peroxy type. The invention also provides mutant calls in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCTCGAAATGTTGATGATTATGTGAGAAAAATGATATGACGATTCTTTTTGCGGCCGGA 1949
